

IN THE CLAIMS

Please amend claim 23 and 61 as follows:

1 23. (Twice Amended) An apparatus, comprising:
2 a display device attachable to a computer, displaying an image;
3 a circuit for converting electronic signals from said computer into said image;
4 a memory disposed to store ID code data input via a user; and
5 a microcomputer for controlling access to said displaying of said image through said
6 display device, responsive to an absence of inconsistency in a comparison between and ID code
7 input by said user with said ID code data stored in said memory, and for receiving signals from
8 said computer to control an operation of said display device.

1 61. A video apparatus, comprising:
2 a circuit for converting electronic signals received from a computer into image signals;
3 a display device attachable to a computer, displaying variable visual images
4 representative of said electronic signals;
5 a memory disposed to store ID code data input via a user; and
6 a microcomputer blocking display of said variable visual image by said display device
7 responsively to a result of a comparison between an ID code input by said user with said ID
8 code data stored in said memory while controlling operation of said display device in
9 conformance with said electronic signals simultaneously received from said computer.
